Praveen
David
Jacob

An Information Technology Engineer by profession graduated from Anna University and currently pursuing post graduate degree in business analysis from Purdue University with a proven track record of experience close to 15 years in the U.A.E working as DevOps to implement and support IT projects for industries catering to Automobile, Healthcare, Real-Estate, Retail, Investment, Security, Government and Ministerial Sectors.

My core domain work experience is in the field of Oracle ERP Applications along with new domain feathers of Data Security and Data Science added for career diversification. I posses the capability to work with good technical, analytical, finance and problem-solving skills also have handled business critical projects, meeting stringent timeline expectations.

I part-time as a Tech Trainer

I have established a startup company which is a platform where I share my experience and knowledge also working to offer my service under the brand name Learnmystuff. I have been engaging in the recent past in Corporate and individual tech training also providing hands on experience with practical labs and helping my trainees well equipped on the job front facing real time challenges. I also believe in the idea that learning is an important part of a professional career and sharing the knowledge you earned is not just the benefit for others but also a great learning experience for self.

What I can do for you

Project Implementation

Oracle ERP Implementation specially in the modules related to Finance and Supply Chain . Data insight and developing key organizational metrics using BI tools like Power BI.
Data Security Solutions and Access policy implementation for all world class databases.

Project Support

Oracle ERP Support related activities for new enhancement, customization, automations and integration activities.

Corporate Training

Provide individual or corporate trainings with hands on experience using practical labs on Oracle ERP, Application Development , Data Analytics & Data Science.

IT Audits

System audits for database transactions and verifying applications and database for security and audit compliance.

How I work with my clients

Step 1

Gathering requirements and conducting a feasibility study based on the client needs.

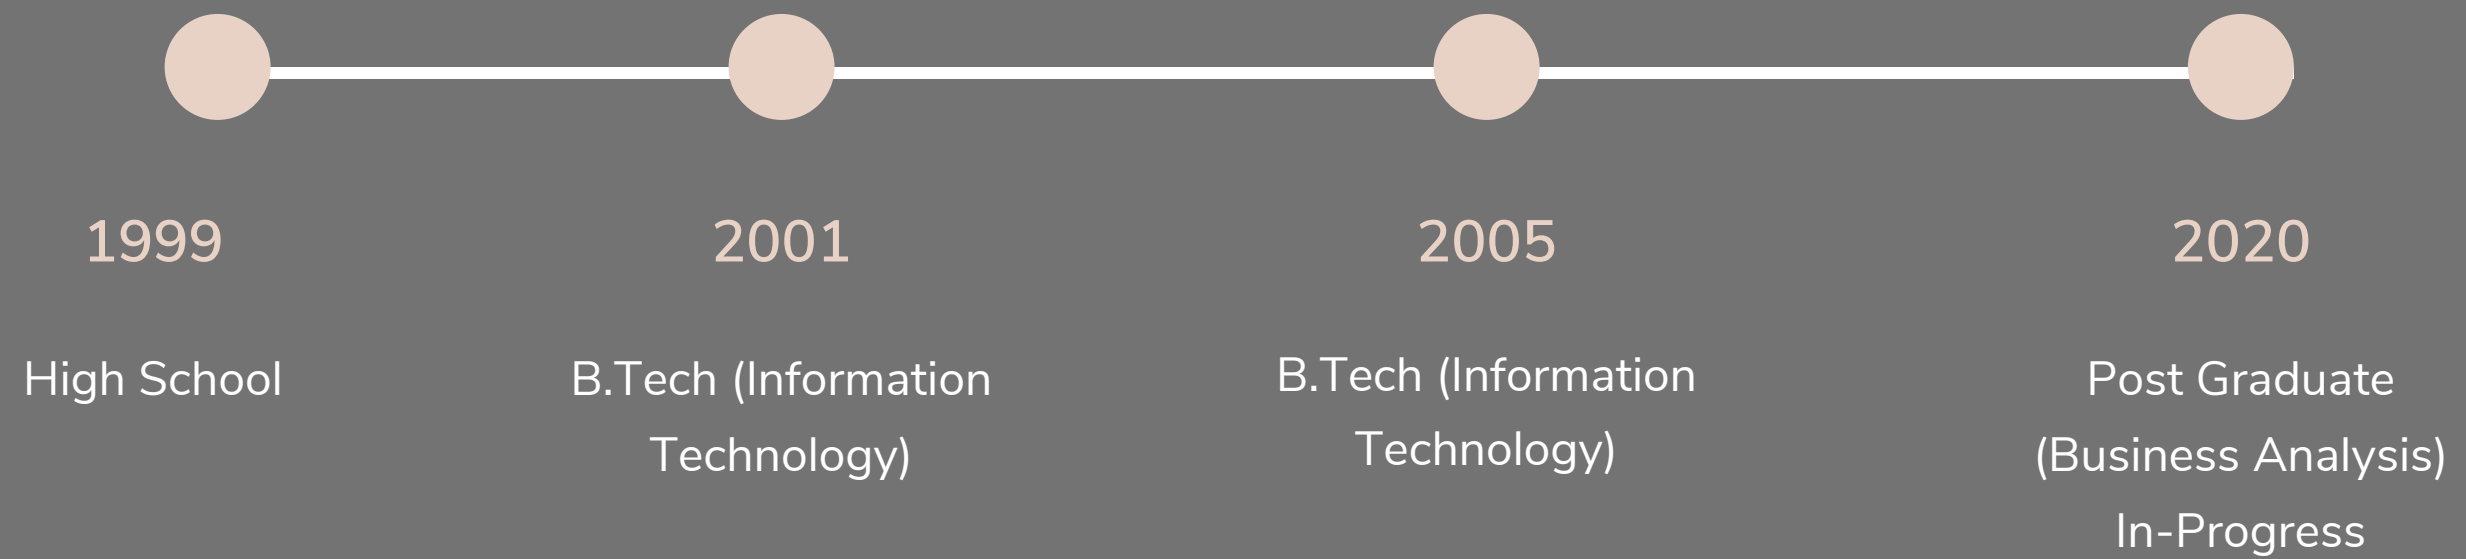

Step 2

Preparing a POC for the solution being proposed or developing the proposal document for user's acceptance.

Step 3

Developing & Executing the project work and deploying the solution as agreed on UAT instance, providing the end user training and project sign off.
